### Business and Products

- 24,000 tonnes of 50,000 items available for prompt stock over a range of carbon steel, alloy steel, stainless steel and non-ferrous alloys including equal and reducing tees, crosses, concentric and eccentric reducers, caps, longitudinally welded CRA, CLAD and lined pipes, 90° and 45° long radius elbows, 180° long radius return bends, 90° short radius elbows, 180° short radius return bends, in all schedules in accordance with ANSI B36.10 and ANSI B36.19 and up to schedule XXS and over, in sizes up to 120" NPS.

- The manufacturing of special products such as reducing elbows, barred tees, equal & reducing laterals, extruded header & manifolds, reinforcement saddles, split tees, launching & receiving traps, Y pieces, bends as per customer drawing.

- The major quality accreditations such as ISO, ASME, GOST, TÜV.

- A staff of more than 700 skilled and motivated professionals.

- 163,000 sqm of commercial area and 474,000 sqm of production area in the world.

- Constant attention to the latest market trends and standard requirements.

- Research and innovation in metallurgical fields.

- Close co-operation with all Clients

are at the basis of **Allied International Group's** rapid growth and success.

### A winning formula

The results say that the formula is working.

We can consider a strategic and expanding sector such as energy, with a strong demand for special parts for production and transmission.

We are creating increasingly a company with advanced technology, top quality production process, an intelligent administration of motivated and specialised human resources and a top-class worldwide network.

We found a leader, who adds intuition and flair to more traditional skills. Better still, we found two leaders, who can merge maturity and experience with a market global world-view.

So production and sales units have increased from 1 in Italy in 2000, the year it was founded, to 22 worldwide in 2012.

We are speaking about **Allied International Group**, which was founded by Valter Alberici, Italian manager, and Marc Herzstein, American manager, in Nibbiano Val Tidone, Piacenza, Italy and which, since its inception, has rapidly become a one-stop solution and worldwide leader in distribution and stock management of all kinds of fittings, flanges, piping, studbolts, gaskets and special supplies for nuclear, petrochemical, oil & gas, thermal power and offshore industries, supplying the world-leading engineering companies and major projects in the field.

### The whole process

It is the only **Group** that can supply the full production range for every demand from these sectors, with a series of quality certifications.

It is the only **Group** that has built the whole process from production to delivery of its manufactured products, thanks to its complete control of the supply chain: raw material procurement, production, stock and distribution.

It is a **Group** which adopts the concept of internationalisation and sustainable development as the founding philosophy of its business mindset. With a positive image and real trust created on the markets, which have produced steady growth and international esteem.

At that point the winning formula would seem complete. But there is something else, difficult to analyse, easy to perceive. Maybe it is enough to say that, as for every product and project, every individual employee of **Allied International Group** is totally committed in terms of intelligence and skill.

These concrete results make **Allied International Group** a suitable and reliable business partner, with respect for a basic principle as its market idea: taking the Clients as our core, taking product quality as our vital point, taking honesty as our essence.
